Livraison standard dans les dimensions suivantes: 13, 16, 18 et 22 mm. Coupe automatique du fil d' aiguille.

Features

Semi-Automatic Lubrication System uses drip oil wicks to carry oil to the critical parts of the machine.

Oil Level Indicator warns the operator or mechanic when the machine is low on oil, preventing machine from severe damage which can be caused by running the machine without enough oil.

Revolutionary Stop Motion contributes to improved product quality by virtually eliminating sewing defects such as "double stops". The roller activation ensures one full revolution to absorb the momentum every time, prolonging the life of the machine and increasing reliability.

Pattern Cam Replacement allows rapid changes in buttonhole styles. Buttonhole size, eye style (eye, no eye) and end finishing (open end, flybar) can be changed by selecting one of the cams.

The cams of the BH 1000 are easily interchangeable; just remove and replace
